PROFESSIONAL SUMMARY

A cloud-focused cybersecurity student with hands-on experience securing multi-cloud infrastructures. I am skilled in assessing cloud security posture, identifying IAM misconfigurations, and automating compliance checks against industry frameworks. This specialized focus is supported by a comprehensive understanding of core information security principles and network security fundamentals from my degree program. I am keen to apply my practical cloud defense skills in an internship dedicated to maintaining a secure and compliant enterprise cloud environment.

EDUCATION

- **Bachelor of Science in Cyber Security**
 - Edith Cowan University – Sri Lanka Campus - [Program link](#)
 - Expected Completion: February 2026
 - Completed Modules: Ethical Hacking and Defense, Computer Forensics, Enterprise Security and Governance, IT Security Management, Network Security Fundamentals, IOT and OT Security, Machine Learning and Data Visualization, Cryptographic Concepts, Project Methods and Professionalism, Software Reverse Engineering.
- **Diploma of Science (Computing/IT)**
 - Edith Cowan College – Australian College of Business and Technology - [Program link](#)
 - Completed: October 2023
 - Completed modules: Systems Analysis, Programming Principles, Computer Security, Database Design, Applied Communications, and Mathematics for Computing.

PROJECTS

Aegis Cloud Security Scanner | [GitHub Link](#)

An Enterprise-grade, multi-cloud security assessment and compliance platform

- Built a full-stack Flask application to perform automated security scanning and vulnerability detection across **AWS, GCP, and Azure**.
- Implemented **200+ security checks** for key services (IAM, S3, EC2, VPC) and designed compliance monitoring for frameworks like **SOC2, PCI-DSS, GDPR, and HIPAA**.
- Developed robust security controls, including **MFA**, end-to-end **encryption (AES-256)**, a secure secrets vault, and prevention mechanisms for **XSS and SQLi**.
- Integrated an **AI-powered chatbot using Google Gemini** to provide users with real-time security recommendations and troubleshooting guidance.
- Engineered a scalable architecture using **PostgreSQL, Redis caching, and Celery** for asynchronous tasks, delivering results to a real-time dashboard via WebSockets.
- **Impact:** Reduced manual audit time by an estimated 90%, enabled continuous compliance monitoring, and provided centralized security visibility across multi-cloud environments.

Tech Stack: Python, Flask, SQLAlchemy, PostgreSQL, AWS Boto3, GCP APIs, Azure SDKs, Docker, Redis, Celery, Google Gemini AI, JavaScript, HTML/CSS, Git.

CERTIFICATIONS

- **Sri Lanka Computer Competency License (SLCCL)**
 - NAITA | 2018
- **Diploma in Computer Studies**
 - MerCom | 2017
- **Advanced Auto Electrical & Programming**
 - OBD Academy
- **Diploma in English Studies**
 - British Way English Academy | 2017
- **IELTS**
 - British Council | 2022 | Overall: 6.0

TECHNICAL SKILLS

- Cybersecurity
- Networking
- Programming
- Database
- Operating Systems
- Cloud & DevOps Skills

EXPERIENCE

Technical Systems & Diagnostics Technician (Part-Time)

Uduwaka Motors – Nawalapitiya, Sri Lanka | 2020

- Performed systematic root cause analysis on embedded systems by interfacing with diagnostic tools (OBD-II, CAN, KWP2000, ISO 9141-2, J1850 VPW, and J1850 PWM) to identify and resolve system faults.
- Analysed real-time data streams from vehicular embedded systems to detect anomalies, honing skills directly applicable to log analysis and threat detection in security operations.
- Managed system integrity by reprogramming and re-flashing Engine Control Units (ECUs), demonstrating an understanding of firmware security and controlled update procedures.
